

News release 2008-01

Serial production of the new STOLL frontend loader started

New STOLL-frontend loader ROBUST FZ go into production

Lengede, February 2008

At time Wilhelm STOLL Maschinenfabrik GmbH from Lengede in Lower Saxony/Germany presented the new STOLL frontend loader ROBUST FZ to the general public during the worlds largest show for agricultural technology, the AGRITECHNICA fair, a brisk demand started promptly and the order books were filled up on site. STOLL promised an availability to the end of February at the very latest. This announcement has been put into action on 19th February 2008.

This event has been committed with a special ceremony in the front loader assembly hall. The first frontend loader from the serie has been handed over from general manager Uwe Glasenapp and production manager Matthias Türp officially to the sales manager Detlev Blume.

Interest in this event were also shown by presence of representatives of public policy, the head of regional district Peine, Mr. Franz Einhaus, and Mr. Hans Hermann Baas, the mayor of Lengede, where STOLL company is located. They accompanied the production start also with their greetings.

For the first time STOLL produced and sold more than 10.000 frontend loaders of the existing programme within the past fiscal year. The new frontend loader completes the STOLL range with extra large loaders for heavy duty tractors up to 300 hp. At a later date - intention is end of the present fiscal year - also the new frontend loaders for tractors with less hp will be available.

The new frontend loader ROBUST FZ (the F stands for high wear-resistant fine-grained steel / the Z stands for the particular parallel motion of the implement by means of the Z-kinematics) impresses at first glance through a modern design, which was adapted with particular attention to the appearance of current tractors. So a paint finish of anthracite in harmony with hydraulic cylinders in silver has been created, which should emphasize the high value of the new product STOLL.

As the market leader for frontend loaders in Germany and the number 2 worldwide, STOLL offers also some technical innovation and underlines so its leading position. Through the Z-kinematics, which do not impede the look ahead for the tractor driver as at other front loader manufacturers, STOLL has used the cavity inside the front loader and has installed the control rods hidden. In connection with the now also covertly installed hydraulic pipes, the tractor driver has a much better view to the cargo and the environment, so the charge will be increased, as well as the security in operation will be improved. At the new STOLL loader also the ease of use has been enhanced. By pressing a button functions will be controlled from the tractor seat, which allow a more effective filling of the bucket and more power with every charging action.

With the new loader, STOLL will definitely progress the formulated corporate goal of further improved market shares, particularly in the export sector, in the future. This became already clear during business meetings with importers worldwide on the AGRITECHNICA show. The presence of Wilhelm STOLL company on the market of agricultural technology will be saved by this new product for the foreseeable future.
