

Press Release 2009-11

STOLL-front loader FC – new front loader for compact tractors

New STOLL frontloader ROBUST FC – completely new series for the compact-tractor class ranging from 10 to 50 HD

Lengede, September 2009

Stoll exhibits on Agritechnica 2009 front-end loaders especially designed for the compact tractor class ranging from 10 to 50 HP. This new series FC 250, FC 350 and FC 450 will be available without parallel linkage, and furthermore FC 450P with mechanical parallel linkage. The 2 smaller types will be operated with implements being mounted with bolts, whereas the types FC 450H and FC 450P are equipped with quick-fit frames for the implements. The loaders FC 350 and FC 450 can be supplied with 3rd function optionally.

At first, a special designed programme for implements will be available - consisting of buckets, manure forks, pallet forks and bale spikes as well as a bucket with hydraulical upper gripping pliers. This programme will be gradually enlarged.

Stoll is able to supply those compact loaders for tractor types for Deutz-Fahr, Same, Lamborghini, New Holland, CaseIH und Kubota. Further models to follow.

Stoll has made the decision to market these series of front-end loaders to enlarge the compact tractor class and will consequently cope with the demand of the corresponding loaders. Special attention is drawn towards the "hobby-farming" in the US, which gets more and more important. For this target group, Stoll also offers the special "skid-steer" implement quick-fit frames. This proves to be a weight-saving construction as the linkage is placed closely to the tractor - an ideal solution for a compact loader in this tractor class.
