

Press release 2009-13

New STOLL-front loader FE – EcoLine

New series for basic tractors from 50 to 110 HP

Lengede, October 2009

Wilhelm Stoll Maschinenfabrik presents on Agritechnica hall 27 booth no. D 49 for the first time the new front loaders, which meet the requirements of basic tractors ranging from 50 to 110 HP with a total weight of maximum 4 tons.

STOLL offers 4 models under the names FE 650, FE 750, FE 850 and FE 950. This series will be market under the name FE-ECOLINE, i.e. the customers obtain a product in STOLL quality which has been optimized under the aspect of cost savings. Those front loaders will be available with- and without mechanical parallel linkage.

The technical equipment fulfils the requirements of a front loader in the everyday application. The loaders can be delivered with EURO quick fit frames or with the American skidsteere version. Interlocking and release of the implements will be operated on both sides from the outside.. The safe parking supports have been taken over from the proven ROBUST F series. The loader can be mounted/dismounted easily. As a matter of course, all bearings are bushed with composite bushings for long-time durability. As option, STOLL offers the damping system „Comfort drive“ as well as a 3rd function for hydraulically operated implements. Corresponding to the requirements of this loader series, there is a selected program of implements available.
