

***Burder Materials Handling and STOLL, the World's best Products with local back up.***

Burder Materials Handling, one of Australia's largest manufacturers of Front End Loaders, Fork Lifts and Agricultural attachments has recently been appointed as the exclusive agent for Stoll Front End Loaders for the Australian Market.

Wilhelm Stoll Maschinenfabrik GmbH manufactures the STOLL Brand Front End Loaders and has been at the cutting edge of Loader design technology since it started manufacturing 50 years ago. This heritage in innovative design and quality products has made Stoll synonymous with German excellence. Stoll was the first company to produce the now industry standard drive in loader attachment system and its latest ProfiLine Loader includes internal mechanical self level mechanism as well as hidden but easily accessible hydraulic lines for much better vision on the tractor.

"After 12 months developing this deal and mapping a rollout plan, it is great to get our collaboration underway" said Adam Fendyk, Burder Group General Manager . "We are very pleased to have our own Burder Brand associated with Stoll". Adam states "It just makes sense to join forces with one of the Worlds largest and best known brands. This is a great addition to our existing suite of products and complements our existing range of products well".

Mr. Armin Walter Director of Sales and Marketing at Stoll said "We at Stoll feel that the knowledge and experience Burder has in the Australian market coupled with their excellent technical support will serve the Stoll product well. Our ProfiLine loaders aren't fully recognised in the Australian market. We already have a presence in the market through existing tractor importers but we are now expanding our distribution opportunities. Having an existing Loader manufacturer distributing our products gives the companies a unique, independent selling point and a new position in the Australian market"

Burder is anticipating that the new business generated will create several new positions in the company, with a focus on warehousing and distribution. Added to the 50 strong manufacturing, design and sales team based in Wangaratta Victoria, Burder is well placed to meet the needs of the Australian rural sector.

In keeping with the top shelf nature of the Stoll range, Burder will be offering the product in Australia with 3<sup>rd</sup> service for extra attachments and hydraulic soft ride for improved ride and increased loader life as standard accessories.

With the first inventory due to land in Australia towards the end of January 2011, Burder is set for the New Year with a great range of new loaders.
